

Cover letter

Here is some hardcore stuff: <https://github.com/Martines90/bvs-v0>- I have been working on this project for 8 months, this is a smart contract written in solidity. This system can be a core part of AI evolution as this can provide the ideal framework for collaborating AI instances to increase effectiveness, problem solving to the next level.

What I designed is a brand new decision making system, called Balanced Voting System. At the moment I am working on the web application part. Anyway, If this project does not convince you about if a genius and skilled mind like me should be part of your team, then nothing will.

So I'm looking forward to starting the interviewing process with you guys.

Márton Horváth
senior full stack, FE heavy react and Solidity developer
